

## STORY

### The rise of the geological cyborgs

Such as the smartphone changed our lives and improved our own brain's access to knowledge within the palm of our hand, and new technologies are emerging to modernize the mining industry. Over the past week, I was exposed to one of those, namely the game-changing KORE GEOSYSTEMS's SPECTOR.

SPECTOR has an equivalent potential to do the same in the geological field and is now revolutionizing core yards & improving geological understanding worldwide. Core logging is transformed, into consistent accurate data capture, improved workflow, removal of bottlenecks, and reduced cost. All quick and easy, simply a touch of a button!

For me, SPECTOR is the perfect geological partner. Continuously learning from logging or validating Geologists, regular updates, and customizable processing, the software has no limits. Graduate geologists/technicians as a result are guided by/learn from the best in your team or the industry. Consistently process core 24/7 or in any extreme. Review the logging data and images from anywhere in the world. Ultimately, end-to-end improvements in production, consistency, accuracy, and cost savings. Freeing up Geologist's valuable time, and allowing them to focus on hitting that next discovery, keeping me and all of the mine based personally gainfully employed long-term. SPECTOR Optics is a great machine and I believe a total game changer for mining in Australia and worldwide.

LEADING MINING INTO THE FUTURE

For those that have known me for my 16 + year exploration career, most will be familiar with my desire to grow & learn, continue to challenge the norm, always give 110% and provide respect to all.

Whether I am chasing an AC rig, flipping bags, clearing a pad, conducting a heritage survey, supervising staff, or processing core, no matter what it is, I always do my best to ensure industry best practices are followed, targets are hit and that no corners are cut.

I am delighted to collaborate with the innovative team at Dynamics G-Ex Kalgoorlie and assist with the roll-out of the game-changing KORE GEOSYSTEMS' SPECTOR. This is a unique productive collaboration of innovation both at Dynamics Kalgoorlie yard and out in the field, product development & testing.

**Jamie McPolin**, Field Operations Supervisor, Australia
